

ARIEF LUKMAN, S.Kom

QA Automation Engineer | API Test Automation | Java | Cucumber BDD

Bandung | arieflukmaan@gmail.com | linkedin.com/in/arieflukman765 | github.com/arief765/api-automation-bdd-framework

PROFESSIONAL SUMMARY

QA Automation Engineer dengan pengalaman lebih dari 5 tahun di industri perbankan, berfokus pada perancangan, pengembangan, dan implementasi custom Java-based data-driven API automation framework untuk validasi end-to-end transaction quality assurance, termasuk UI-to-API orchestration, shared helper abstraction, database validation, performance testing, dan reusable execution.

KEY ACHIEVEMENTS

- Membangun dan mengimplementasikan custom API automation framework mencakup 50+ API endpoints dan sekitar 1000 test scenarios.
- Mempercepat regression execution menjadi sekitar 2 jam melalui reusable execution via executable JAR yang digunakan tim.
- Mengembangkan shared helper layer untuk request handling, signature generation, validation helper, config loader, dan DB helper.
- Mengimplementasikan shared variable management untuk token chaining dan multi-step transaction orchestration.
- Mengembangkan batch execution engine untuk menjalankan multiple test cases dari Excel-based data source.
- Menjalankan performance testing hingga 1000 request per 5 menit.
- Menambah automation coverage dan database validation berdasarkan production incident analysis.

TECHNICAL SKILLS

Programming: Java

Automation: Cucumber BDD, Data-Driven Testing, JSON Endpoint Configuration

Framework Components: Shared Helper Layer, Shared Variable Management, Batch Execution Logic, Executable JAR Execution

Database: SQL Server, PostgreSQL

Performance: JMeter

Observability: Splunk, ElasticSearch, Dynatrace

Tools: Maven, Git, Postman

PROFESSIONAL EXPERIENCE

Bank OCBC NISP — QA Automation Engineer / Application Support Engineer

- Mengembangkan dan memelihara custom Java-based data-driven API automation framework untuk validasi end-to-end transaksi perbankan.
- Menguji UI-to-API business flow orchestration meliputi web authentication flow, token exchange, inquiry, OTP, transfer submission, transfer status validation, dan unbinding process.
- Mengimplementasikan batch execution untuk multiple test cases dari Excel dengan reusable scenario execution.
- Mengembangkan reusable helper abstraction untuk request handling, shared variable management, configuration loading, response validation, dan database validation.
- Melakukan response validation dan database validation terhadap core banking / sistem inti.
- Menjalankan regression testing, performance testing, defect analysis, production issue investigation, monitoring, dan root cause analysis.
- Mengembangkan reusable executable JAR untuk digunakan tim menjalankan automation secara konsisten.

PT Inovasi Mandiri Pratama — IT Support Engineer

- Deployment aplikasi, troubleshooting sistem, support operasional, konfigurasi teknis.

PT DOT SYSTEM Indonesia — Implementor

- Implementasi sistem, validasi kebutuhan pengguna, support teknis implementasi.

PORTFOLIO PROJECT

API Automation BDD Framework (GitHub)

- Custom Java-based data-driven API automation framework dengan multi-environment configuration (SIT/UAT), shared helper layer, shared variable management, database validation, batch execution, UI-to-API flow orchestration, dan reusable executable JAR.

EDUCATION & CERTIFICATION

S1 Teknik Informatika — Universitas Komputer Indonesia

MS SQL Server Reporting Services — Brainbench
